## About the Conference

Dear colleagues, dear participants of the **Global Research Conference on Genetics and Genomics (GRCGG2024)**,

I am very happy to welcome you to this GRCGG2024 conference. Genetics is a term that refers to the study of genes and their roles in inheritance. Genetics involves scientific studies of genes and their effects. Genes carry the instructions for making proteins, which direct the activities of cells and functions of the body. Genomics is a more recent term that describes the study of all of a person's genes (the genome), including interactions of those genes with each other and with the person's environment. Genomics includes the scientific study of complex diseases such as heart disease, asthma, diabetes, and cancer because these diseases are typically caused more by a combination of genetic and environmental factors than by individual genes. Genomics is offering new possibilities for therapies and treatments for some complex diseases, as well as new diagnostic methods. These are the topics of GRCGG2024.

I conclude by wishing you all the best for the GRCGG2024 especially I wish you a fruitful, exchange of ideas and results.

Best regards

**GRCGG2024 Scientific Organizing Committee**
